Track A: Project Udyam Digital - Synthetic dataset

All businesses, people, identifiers, documents and figures in this pack are **fictional** and generated for the Accel YTL Hackathon. They do not describe any real company or customer.

What's in the pack

File	Rows	What it is
`product_catalogue.csv`	25	Accel Business products with price range, setup fee, contract, eligibility rules and dependencies. Use it to power the advisor and the quote.
`smb_leads.csv`	5,000	One quarter (Apr-Jun 2026) of small-business leads with profile, funnel stage reached, drop reason, dates, and - for activated leads - bundle bought, value, churn and NPS.
`mock_gstin_registry.csv`	3,534	Mock GST registry. Back your "GSTIN lookup" API with this file.
`mock_udyam_registry.csv`	2,723	Mock Udyam registry. Back your "Udyam lookup" API with this file.
`kyc_documents/`	47 images	Specimen KYC documents for 12 applicants (K01-K12): business registration, Udyam certificate, signatory ID and address proof. Some have problems your Smart KYC should catch.

Funnel at a glance

Stage	Leads	% of previous stage
Lead	5,000	-
Contacted	3,406	68%
Needs assessed	1,974	58%
Quote accepted	861	44%
KYC complete	588	68%
Activated	368	63%

Activated customers took 17.6 days on average from lead to activation and made 3 follow-up calls. Blended acquisition cost is about Rs 15,000 per activated customer.

smb_leads.csv - column guide

Column	Meaning
lead_id	Unique lead ID (L00001...)
created_date	Date lead was created
lead_source	Field sales, Website form, Channel partner, Inbound call, Referral, WhatsApp campaign
business_name, business_type, segment	Fictional business, its type and one of 4 segments
city, city_tier, state	Location; tier 1 or 2
preferred_language	Language the owner prefers
employee_count, num_sites, annual_turnover_band	Size of the business
has_gstin, gstin, has_udyam, udyam_number	Registration status and numbers (match the mock registries)
current_internet, current_provider, monthly_telecom_spend_inr	Current setup and spend
products_of_interest	Product IDs the lead asked about (`;` -separated)
contact_name, contact_role	Fictional contact person
stage_reached	Last funnel stage reached
outcome, drop_reason	Activated or Dropped, with reason
contacted_date ... activated_date	Date each stage was reached (blank if not reached)
days_lead_to_activation	Days from lead to activation (activated only)
customer_follow_up_calls	Times the customer called to chase status
bundle_products	Products bought, as `P01x1;P07x2` (product x quantity)
monthly_bundle_value_inr, one_time_setup_inr, contract_months	Value of what was bought
churned_within_6_months, nps_score	Outcome after activation (0-10 NPS)
acquisition_cost_inr	Sales and partner cost spent on this lead

product_catalogue.csv - eligibility rules

- `available_city_tiers` : tiers where the product is sold
- `min_employees` , `min_sites` : product is only offered at or above these sizes
- `requires_gstin = Y` : cannot be sold without a valid, active GSTIN
- `requires_one_of` : product needs at least one of these products in the same bundle (`|` -separated)
- `typical_install_days` : use for the order tracker and for expected activation dates

Notes on identifiers

- GSTINs follow the real 15-character structure with a valid checksum, so you can build a real format check. The 4th character of the embedded PAN is always `x`, which is not a valid entity type, so none of them can match a real taxpayer. Accept `x` in your validator.
- Udyam numbers use district code `00`, which does not exist.
- Use 2026-07-15 as "today" for any date-based check (e.g. address proof must be no older than 90 days).

Privacy expectations

Treat this data as if it were real customer data: collect only what each step needs, show a clear consent notice before KYC, mask identifiers in logs and UI, and explain how long documents are retained. Your 1-page privacy note should cover these choices.
